AQA

A-level
COMPUTER SCIENCE

Paper 2

Time allowed: 2 hours 30 minutes

Materials
For this paper you must have:
• a calculator.

Instructions
• Use black ink or black ball-point pen.
• Fill in the boxes at the top of this page.
• Answer **all** questions.
• You must answer the questions in the spaces provided. Do not write outside the box around each page or on blank pages.
• If you need extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
• Do all rough work in this book. Cross through any work you do not want to be marked.

Information
• The marks for questions are shown in brackets.
• The maximum mark for this paper is 100.

Advice
• In some questions you are required to indicate your answer by completely shading a lozenge alongside the appropriate answer as shown. ⬤
• If you want to change your answer you must cross out your original answer as shown. ⬲
• If you wish to return to an answer previously crossed out, ring the answer you now wish to select as shown. ⬤

For Examiner's Use

Answer **all** questions.

0 1 . 1 A bitmap image is 1000 pixels wide by 800 pixels high.

The image takes up 400 kB of storage space when represented as a bitmap, excluding metadata.

Calculate the maximum number of different colours that could appear in the image.

You should show your working.

[3 marks]

Answer _____

0 1 . 2 The same image can also be represented using vector graphics.

The vector graphics representation of the image takes up 2 kB of storage space.

Explain why the amount of storage space taken up by the vector graphics representation of the image is significantly smaller than the space taken up by the bitmap representation.

[3 marks]

_____

_____

_____

_____

_____

_____

_____

_____

0 1 . 3 One advantage of vector graphics compared to bitmap graphics is that fewer bytes are used to represent an image.

State **two** other advantages of vector graphics compared with bitmap graphics.

[2 marks]

Advantage 1 _____

_____

_____

Advantage 2 _____

_____

_____

Turn over ▶

0	5

A sports centre uses a relational database to store information about its facilities (such as the swimming pool) and the bookings that have been made to use them.

Figure 3 shows the structure of the relations in the database.

Figure 3

Facility(<u>FacilityID</u>, Description, MaxPeople, PricePerHour)

FacilityForSport(<u>Sport</u>, <u>FacilityID</u>)

Booking(<u>FacilityID</u>, <u>BookingDate</u>, <u>StartTime</u>, EndTime, CustomerID)

Customer(<u>CustomerID</u>, Forename, Surname, EmailAddress)

- The Facility relation stores the different facilities available at the sports centre. Each one is identified by a unique number and has a brief description. For example, the facility with FacilityID 1 has the description 'Outdoor Pitch A'. PricePerHour is the price of hiring a facility for 1 hour. For example, the facility with FacilityID 1 has a price per hour of £17.50.

- The FacilityForSport relation identifies which facilities are suitable for which sports. For example, the facility with FacilityID 1 is suitable for football, rugby and hockey and would therefore require three separate records in this relation.

- The Booking relation stores the bookings that have been made. Bookings must start and end either on the hour, at quarter past, half past or quarter to the hour. A customer can make bookings for more than one facility for the same time. For example, a badminton club secretary might book both of the indoor sports halls for the same time. However, each facility can only be booked by one customer at any one time.

- The Customer relation stores the details of customers who have made bookings.

0	5	.	1

The entity identifier (primary key) for the Booking relation is a composite entity identifier, consisting of these three attributes:

FacilityID, BookingDate, StartTime

An alternative entity identifier could have been chosen, composed of different attributes.

Shade **one** lozenge to indicate which of the following groups of attributes would form a valid alternative entity identifier for the Booking relation.

[1 mark]

A BookingDate, StartTime, EndTime $\quad\square$

B FacilityID, BookingDate, EndTime $\quad\square$

C FacilityID, StartTime, CustomerID $\quad\square$

D FacilityID, BookingDate, EndTime, Sport $\quad\square$

0 5 . 2 A different design was originally proposed for the database. This design did not have the Customer relation and had the following design for the Booking relation:

Booking(<u>FacilityID</u>, <u>BookingDate</u>, <u>StartTime</u>, EndTime, Forename, Surname, EmailAddress)

Explain why this alternative design would have been rejected in favour of the design in **Figure 3**.

[2 marks]

_____

_____

_____

_____)

Question 5 continues on the next page

Turn over ▶

Figure 3 is repeated below to help you answer Question 05.4 without having to turn back in the question paper.

Figure 3 (repeated)

Facility(FacilityID, Description, MaxPeople, PricePerHour)

FacilityForSport(Sport, FacilityID)

Booking(FacilityID, BookingDate, StartTime, EndTime, CustomerID)

Customer(CustomerID, Forename, Surname, EmailAddress)

| 0 | 5 | . | 4 | A customer wants to book a facility that is suitable for playing basketball on the 15/06/2021 between 14:15 and 16:15

As part of the booking process, a query is needed to list all the existing bookings that would overlap with the new booking.

Write a query that will list all the bookings for facilities that are suitable for playing basketball and which would overlap with the booking that the customer wants to make.

For each booking which would overlap with the new booking only the FacilityID, StartTime and EndTime fields should be listed.

[7 marks]

Turn over for the next question

There are no questions printed on this page.

DO NOT WRITE ON THIS PAGE
ANSWER IN THE SPACES PROVIDED

This table is included so that you can answer Question 06.1 on page 17.

Table 1 – Standard AQA assembly language instruction set

`LDR Rd, <memory ref>`	Load the value stored in the memory location specified by `<memory ref>` into register `d`.
`STR Rd, <memory ref>`	Store the value that is in register `d` into the memory location specified by `<memory ref>`.
`ADD Rd, Rn, <operand2>`	Add the value specified in `<operand2>` to the value in register `n` and store the result in register `d`.
`SUB Rd, Rn, <operand2>`	Subtract the value specified by `<operand2>` from the value in register `n` and store the result in register `d`.
`MOV Rd, <operand2>`	Copy the value specified by `<operand2>` into register `d`.
`CMP Rn, <operand2>`	Compare the value stored in register `n` with the value specified by `<operand2>`.
`B <label>`	Always branch to the instruction at position `<label>` in the program.
`B <condition> <label>`	Branch to the instruction at position `<label>` if the last comparison met the criterion specified by `<condition>`. Possible values for `<condition>` and their meanings are: `EQ`: equal to `NE`: not equal to `GT`: greater than `LT`: less than
`AND Rd, Rn, <operand2>`	Perform a bitwise logical AND operation between the value in register `n` and the value specified by `<operand2>` and store the result in register `d`.
`ORR Rd, Rn, <operand2>`	Perform a bitwise logical OR operation between the value in register `n` and the value specified by `<operand2>` and store the result in register `d`.
`EOR Rd, Rn, <operand2>`	Perform a bitwise logical XOR (exclusive or) operation between the value in register `n` and the value specified by `<operand2>` and store the result in register `d`.
`MVN Rd, <operand2>`	Perform a bitwise logical NOT operation on the value specified by `<operand2>` and store the result in register `d`.
`LSL Rd, Rn, <operand2>`	Logically shift left the value stored in register `n` by the number of bits specified by `<operand2>` and store the result in register `d`.
`LSR Rd, Rn, <operand2>`	Logically shift right the value stored in register `n` by the number of bits specified by `<operand2>` and store the result in register `d`.
`HALT`	Stops the execution of the program.

Labels: A label is placed in the code by writing an identifier followed by a colon (:). To refer to a label, the identifier of the label is placed after the branch instruction.

Interpretation of `<operand2>`

`<operand2>` can be interpreted in two different ways, depending on whether the first character is a # or an R:

- `#` – use the decimal value specified after the `#`, eg `#25` means use the decimal value 25
- `Rm` – use the value stored in register `m`, eg `R6` means use the value stored in register 6

The available general-purpose registers that the programmer can use are numbered 0–12

Turn over ▶

0 6   **Figure 4** shows an assembly language program which has been written using the AQA assembly language instruction set. The instruction set is explained in **Table 1** on page 15.

Figure 4

```
          CMP R2, #0
          BEQ exit
          MOV R0, #0
          MOV R3, #1
        moveleft:
          LSL R2, R2, #1
          LSL R3, R3, #1
          CMP R2, R1
          BLT moveleft
          BEQ mainloop
          LSR R2, R2, #1
          LSR R3, R3, #1
        mainloop:
          CMP R1, R2
          BLT skip
          ADD R0, R0, R3
          SUB R1, R1, R2
        skip:
          AND R4, R3, #1
          CMP R4, #1
          BEQ skipshiftR2
          LSR R2, R2, #1
        skipshiftR2:
          LSR R3, R3, #1
          CMP R3, #0
          BNE mainloop
        exit:
          HALT
```

The program takes its input values from registers `R1` and `R2` and stores its output in registers `R0` and `R1`

0 6 . 1 Complete the trace table below to show the results of executing the program in **Figure 4** when the initial values in registers R1 and R2 are 34 and 6

Each register can hold a 16-bit value.

You may find it easier to understand the operation of the program if you write the contents of the registers out in both binary and decimal.

You may not need to use all the rows in the table.

[6 marks]

R0	R1	R2	R3	R4
	100010 (34)	110 (6)		

Question 06 continues on the next page

Turn over ▶

0 6 . 2 The initial values for the program (its inputs) are stored in R1 and R2 and the final values stored in R0 and R1 are its outputs.

By considering the inputs and the outputs in your trace table for Question **06.1**, describe the purpose of the program.

[2 marks]

_____

_____

_____

12

1 0   A particular computer uses a **normalised** floating point representation with an 8-bit mantissa and a 4-bit exponent, both stored using **two's complement**.

1 0 . 1   Four-bit patterns that are stored in this computer's memory are listed in **Figure 5** and are labelled with the letters **A** to **D**. Three of the bit patterns are valid normalised floating point numbers and one is not.

Figure 5

A

1	● 0	0	0	0	0	0	0

Mantissa

0	1	1	1

Exponent

B

0	● 1	0	0	0	0	0	0

Mantissa

1	1	1	1

Exponent

C

1	● 1	1	0	1	0	0	0

Mantissa

1	0	1	0

Exponent

D

0	● 1	1	1	1	1	1	1

Mantissa

0	1	1	1

Exponent

Complete **Table 2** below. In the **Correct letter (A–D)** column write the appropriate letter from **A** to **D** to indicate which bit pattern in **Figure 5** is an example of the type of value described in the **Value description** column.

Do **not** use the same letter more than once.

Table 2

| Value description	Correct letter (A–D)
A negative value that is valid in the representation.	
The largest positive value that can be represented in the system.	
A value that is not valid in the representation because it is not normalised.	

[3 marks]

10.2 **Figure 6** shows a floating point representation of a number:

Figure 6

0	•1	1	0	1	0	0	0

Mantissa

0	1	1	0

Exponent

Calculate the decimal equivalent of the number.
You should show your working.

[2 marks]

Answer

In this floating point system, the closest possible representation of the decimal number 104.7 is shown in **Figure 7**.

Figure 7

0	•1	1	0	1	0	0	1

Mantissa

0	1	1	1

Exponent

By converting this number back to decimal it can be seen that the actual value stored is 105

10.3 Calculate the **absolute error** that has occurred when representing 104.7 in **Figure 7**.

[1 mark]

Answer

Question 10 continues on the next page

Turn over ▶
